Spam & Phishing

October 23, 2018

2

# Email Background

- Exchanging electronic messages first appeared in the 1960s with the advent of “time-sharing” systems
- By the mid-1970s electronic messages evolved into the form we use today

3

# Email Background (Con't)

- Early versions often required users to be using the same time shared computer
- Today's email systems do not require the sender and recipient to be on the same network or on-line at the same time

Spam & Phishing

October 23, 2018

4

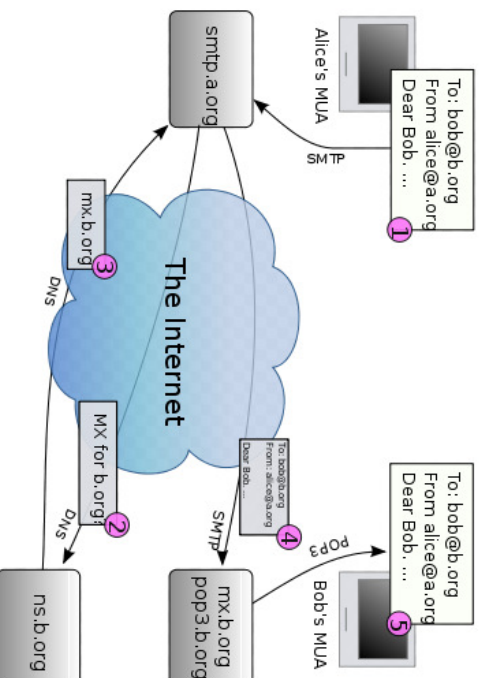

## Email Background (con't)

- Today's email systems are based on a store and forward model
- Email servers accept, forward, store and deliver messages
- Format and handling of messages is defined by the IETF (<http://www.ietf.org/>) in a series of RFC documents

## Email Background (con't)

- Sending and receiving email involves a suite of protocols: SMTP, POP3 and IMAP

# Email Background (Con't)

- When first conceived no thought was given to the need for message privacy or integrity so messages are always sent in clear, readable text

Spam & Phishing

October 23, 2018

7

# Spam

- Spam is usually defined as unsolicited commercial email, typically in the form of marketing

- Mail server bounce or message transfer failure messages are not spam

National

Nationale

Spam & Phishing

October 23, 2018

8

## SPAM (Con't)

- Origin of the term is unknown
- SPAM, like physical admail, is more of an annoyance than anything else because it wastes bandwidth and the time it takes to deal with it
- Governments try to regulate and control SPAM but with little effect

National  
Capital  
Freenet

Spam & Phishing

October 23, 2018

9

## SPAM (Con't)

- Although fines can be significant spammers persist because it is inexpensive to do and the chance of getting caught is minimal
- Best to simply delete SPAM that makes it into you inbox
- Don't reply or try to unsubscribe, only confirms your email address is valid

Spam & Phishing

October 23, 2018

10

## SPAM (Con't)

- Most email providers offer some form of message filtering to reduce the amount that makes it through to the inbox

- Other forms of spamming are starting to appear: smishing and vishing

National  
Capital  
Freenet

de la Capitale  
Nationale

Spam & Phishing

October 23, 2018

11

## SPAM (Con't)

- When registering at websites it can be prudent to provide a disposable email address
- That way if the amount of messages from the website becomes excessive you can simply delete the email address

National  
Capital  
Freenet

Libertel  
de la Capitale

Spam & Phishing

October 23, 2018

12

# PHISHING

- A subclass of spam often employing social engineering to obtain credentials (via fake websites) or to install malware
- Phishing attempts can come in several forms: email, social media, phone call or text message

## PHISHING (Con't)

- Messages designed to look legitimate often mimicking legitimate organizations
- Warning signs include:
  - Not addressing you by name
  - Spelling and grammar mistakes
  - Conveying a sense of urgency

# PHISHING (Con't)

- Common scenarios include:
  - Asking you to:
    - verify your personal or login information
    - confirm an on-line purchase
    - verify credit card details
  - Offering prizes for completing a survey
  - Convey a sense of urgency

# PHISHING (Con't)

The screenshot shows an email interface with the following content:

**FROM** security@realbankname.com  
**TO** me  
**SUBJECT** Verify your account NOW

**REAL BANK NAME**  
CUSTOMER SECURITY TEAM

Dear Customer,  
We have notice unusual activities on you're account. Please click on the link below to verify your account details.

**WARNING: Verify immediately or your account will be suspended within 24 hours.**

**VERIFY MY ACCOUNT**  
<https://www.realbank.com.au>  
<https://account.realbank1234.com>

verify-helper.exe (64 KB)

Callouts from the image:

- ALWAYS check the 'from' email address, and be aware that even this can be spoofed.
- Scammers will make every attempt to make the email look legit. If in doubt, check with the organisation directly.
- May contain spelling mistakes and poor grammar.
- Scammers may feign a sense of urgency or make threats to trick you in to action.
- ALWAYS check links in emails are real before clicking on them. Hover on desktops or 'tap and hold' on mobile devices.
- NEVER open or download anything unless you are 100% sure they are from a safe source, especially if they are an .EXE file.

# PHISHING (Con't)

- **Protect yourself by:**
  - Not clicking links or opening attachments
  - Search names or exact wording to check for scam reports
  - Never providing personal or financial information
  - Use your own bookmark to visit sites

# PHISHING (Con't)

- **Other common forms include:**
  - Spear phishing - targets business with personalized email designed to look from a trusted source
  - Pharming - redirects you to a fake version of a legitimate website via a poisoned DNS entry

# Have I Been Hacked?

- Email spoofing which involves falsifying email sender information is rampant
- Email software usually hides the message envelop or header but it is key to understanding where the message really came from

23

# Have I Been Hacked? (Con't)

- If your email address has been spoofed it doesn't mean you have been hacked and there is nothing you can do about it
- Usual signs that your email address has been spoofed are server bounce messages or others asking why you sent them a message

27

# Website Spoofing

- Fake website designed to mimic a legitimate site
- Usually part of an email phishing scam
- Attempts to trick you into providing personal and/or financial information

National  
Capital  
Freenet

Libertel  
de la Capitale  
Nationale

Spam & Phishing

October 23, 2018

28

## Website Spoofing (Con't)

- Telltale signs of a fake website:
  - Site URL is incorrect
  - Asks for personal or financial information
  - Low resolution graphics
  - Poor spelling and grammar
  - Not a secure website ( <https://> )

## Website Spoofing (Con't)

- Be careful when typing URL address to avoid landing on a fake site
- If unsure about a domain:
  - Check it with a WHOIS query (e.g. <https://who.is/> )
  - Enter it in a search engine
  - Verify the contact information

## Website Spoofing (Con't)

- If you end up at a fake site:
    - LEAVE IT IMMEDIATELY
    - Report it to:
      - The legitimate site owner
      - Google
- [https://safebrowsing.google.com/safebrowsing/report\\_badware/](https://safebrowsing.google.com/safebrowsing/report_badware/)
